

Impacts of Organizational and Contextual Factors on Technological Fluency: Model Expansion

Questions and Answers

Is ARI looking to validate previous work, or can we propose innovative approaches?

You can propose innovative approaches. The current TF model is focused on the individual. The intent of this effort is to expand the current model to include meso and macro organizational and contextual factors that impact TF in the Army.

Does ARI have a preferred methodological approach (e.g., qualitative vs. quantitative, survey vs. observational) when it comes to collecting and synthesizing the results? Or is the intent to let offerors propose what best fits the model expansion?

We do not have a preferred methodological approach.

Is there a way to review findings or better understand the prior scope?

Ongoing work is focused on the individual. No other ARI funded work has looked at organizational or contextual factors impacting TF.
